

REMARKS

The amendment in Paragraph [0002] of the specification simply inserts the publication number of an application originally identified only by serial number.

The amendment in Paragraph [0007] is a correction of a minor clerical error, the need for which is apparent from Office records. The list of patents and applications in this Paragraph is stated to be of E Ink and MIT patents relating to electrophoretic displays. U.S. Patent No. 6,249,721 is not assigned to either E Ink or MIT and does not relate to this technology. Hence, correction is obviously required, and Office records show that the correct Patent No. 6,249,271 must be intended.

The amendments in Paragraphs [0089] and [0099] are corrections of minor drafting errors, the need for which is, in each case, obvious from the context. There is no previous mention of Publication No. 2004/0027326, and it will be immediately apparent from an examination of this publication that it does not relate to the relevant subject matter. There is a previous mention of Publication 2004/0027327 (see Paragraph [0007]) and this publication does describe the relevant subject matter, so this must be the publication to which Paragraphs [0089] and [0099] were intended to refer.

No new matter is introduced by any of these amendments.

An Information Disclosure Statement is filed herewith.

Respectfully submitted
